- Supports up to 4 mobile devices per Entraguard unit
- Wireless chime available
- LED lighting activates when in use
- No monthly maintenance charges or App fees

Keri's **New Entraguard ONE+™** is a rugged single-door VOIP Video-Doorbell Intercom unit that is designed to secure an entrance to a residential or small commercial enterprise. The Entraguard ONE+ from Keri goes a step farther than the basic Entraguard ONE by adding a numeric keypad for unique entry codes. Users of the system may enter any one of up to 40, four-digit user codes to gain access to the property. History of unlock events can be viewed in the mobile application by user, date and time. The ONE+ provides a means to monitor and unlock a door remotely, through interaction with a mobile device, and can communicate via VOIP with up to 4 devices. Using a smartphone or tablet, running an app on either iOS or Android, the Entraguard ONE+ can provide video from your door to your mobile device to remotely unlock the door, and store pictures or videos. Notifications to view live video will appear in the app when the Entraguard call button is pressed, or when motion events are detected by the on-board camera. There is two-way audio and one-way video between the Entraguard ONE+ and the mobile device allowing the tenant to discuss the nature of the visit and view the caller, prior to releasing the door. Now, even the smaller enterprises can have an electronic door control from Keri Systems, with convenient features, at an affordable cost.
